---

Dear Ms. Barajas-Ochoa,

I request that the Prop 65 NSRL (*No Significant Risk Level*) for Glyphosate must be a validly arrived at NSRL, per CA regulations, substantially lower than the proposed 1100 micrograms per day, in order for this Safe Harbor to actually be safe to Californians.

Until a comprehensive independent study is done, showing real life exposure levels, regulatory authorities should use a NSRL of well below 0.0001 micrograms/day, (*Thongprakaisang et al., 2013*), the level where breast cancer has been detected, in keeping with 'The Precautionary Principle'.

Respectfully yours,
